

Learn to Deploy Android Applications Locally Using APK File

Steps:

1. Build APK

In Android Studio: Build > Build Bundle(s)/APK(s) > Build APK(s)

2. Locate APK

Path: app/build/outputs/apk/release/app-release.apk

3. Enable Unknown Sources

On device: Settings > Security > Install unknown apps > Enable for File Manager/Chrome

4. Transfer APK to Device

Copy via USB, Google Drive, or use command:

```
adb push app-release.apk /sdcard/
```

5. Install APK

Open APK file on device and tap Install

Or via ADB:

```
adb install app-release.apk
```

6. Launch App

Open from app drawer and test the application
